A new classic with a green soul

68

It's time for beauty

Make lives happen.

We've been building our industrial story, based on innovations in materials and processes and a distinctive style, ever since 1912. Today, we still firmly believe in a future of attractive, ethical, useful choices, and this demands courage and responsibility, so we are continually increasing the proportion of our products that use durable and recycled materials. We measure, certify and confirm their qualities. With the utmost transparency. And we encourage balanced lifestyles, for example embracing beautifully styled and designed products that enable correct storage of foods, and the saving of money and resources, with containers for vacuum packing or a small but inspired clip for reclosing packets. Responsibility is key, and will be at the centre of our next 110 years.

Responsible Design

This year we celebrate our 110th birthday, 110 years in which everything has changed: lifestyles inside and outside the home, materials and technologies. Companies with over a century of history, like ours, represent a unique blend of taste, sensitivity, know-how and creativity.

In these 110 years, we have built an authentic brand that conceives and produces quality through design and constantly updated knowledge. We have created a company that operates with the mindset of a laboratory, developing and testing the materials, functions and tools of tomorrow, and researching solutions for a more natural economy.

Responsibility is the keyword for our future, and in our view, caring for the world means delivering environment-friendly, attractive, functional products. At every moment, on every project, through every solution, our history is continually renewed.

110 Pitcher - Caraffa - Carafe - Karaffe - Jara
Tribute to designer Charles F. Joosten

Made for nature

We are specialists in plastic, and the current challenge is not to deny our historic expertise, but to bring about profound innovation in the home products sector.

In the world of plastics, circularity creates a model that offers an ethical alternative to the traditional linear economy. The Circle programme of environmentally sustainable products proves that a new beauty can generate items for daily use that extend the awareness of people and communities, guiding behaviours and reducing environmental losses and social costs.

So conceiving an environment-friendly product means

constant research into the development and use of second-life plastics, obtained from post-consumer recycling or derived from biomass residues and waste, supporting a decarbonisation strategy which reduces the company's direct and indirect emissions and will make it carbon neutral in the medium term

Choosing and using even just one of the Circle brand products means helping to improve the planet.

Watch the video

Certified sustainability

CIRCLE[®]
Re-use don't waste/

Our environmental commitment is genuine, certified by independent bodies, and it embraces all aspects of the production process.

CSI is the international certification and testing centre that provides leading-edge tools for technological research, testing and voluntary certification. The certification classifies secondary raw materials derived from the recycling of plastic waste in accordance with art. 184ter of Legislative Decree 152/06 and with UNI 10667, the standard on plastics referred to in the Ministerial Decree dated 05/02/98.

VALIDATED

UL is global safety, protection and sustainability science leader and supplies testing, inspections, certifications and training, and advisory and risk management services, for companies that make innovation their distinguishing feature. UL certifies the recycled plastic of the Fratelli Guzzini Re-Generation collection, with a view to reducing the impact of global plastics and waste.

ISCC is a globally applicable sustainability certification system and covers all sustainable feedstocks, including agricultural and forestry biomass, circular and bio-based materials and renewables.

SUSTAINABLE PRODUCTION Within the Circle Programme, Fratelli Guzzini has achieved its challenging objectives in terms of recycled plastic product output as a percentage of total production, reaching a quota of 36% in 2020 and 38% in 2021. The application of circular economy principles to its value chain has enabled Fratelli Guzzini to reduce waste from its Recanati plant to almost nothing. Over time, the company has cut energy and water consumption and emissions of carbon dioxide, and it is also committed to covering its entire energy needs from renewable sources.

PACKAGING SUSTAINABILITY Every year, Guzzini uses hundreds of tonnes of certified 100% recycled paper for bagging and packaging its products. To reduce raw material consumption and shipping volumes, in 2020 lighter cardboard packaging was adopted for all new products. Graphics were also simplified in order to reduce the amount of ink, while continuing to prefer soy inks compatible with the compostability standards of the entire Circle line.
